

Personal Business Management

Abstract

This project addresses the efficient management of personal businesses engaged in delayed payment transactions, where customers settle their dues after specific periods. The system encompasses customer record keeping, transaction monitoring, and automated reminders.

Central to the project is a customer management module, facilitating the recording of customer information, product purchases, and associated payment obligations. This aids in personalized customer service and transaction history tracking.

The transaction monitoring component ensures accurate documentation of transaction details, encompassing dates, products, and payment deadlines. Real-time transaction records provide insights into financial inflows and outflows.

Automation is integral, featuring reminders to alert customers about impending payment deadlines and assisting business owners in tracking pending payments. This feature safeguards revenue and fosters timely payments.

In summary, this project streamlines personal business management through centralized customer records, comprehensive transaction tracking, and automated reminders. By enhancing customer relationships and optimizing financial oversight, the system offers an effective solution for modern personal business challenges.

Keywords: personal business management, customer records, transaction monitoring, automated reminders, financial oversight.
